Thoropass's End-to-End Compliance Solution

A tech-first solution for compliance implementation, monitoring and audit and **the only solution that can deliver a Type 1 draft report in two days**.

Thoropass's complete compliance solution combines customer and auditor efficiency to deliver the only audit experience that takes you from implementation to audit in one centralized location.

Fastest path to SOC 2 audit

→ Automated evidence gathering and streamlined audit process

→ 60% faster SOC 2 audits vs. traditional auditors

Lowest lift for your company

→ Minimal clerical and communication overhead

→ 90% less time spent on audit preparation

Highest quality audit report

→ Programmatically verified, no human error

→ High-quality audit reports accepted by security-conscious enterprises

How It Works

While breezing through your Thoropass onboarding, monitors that align to your company's tech-environment are activated. Our auditor-approved monitors automatically collect the specific data and settings needed to satisfy several SOC 2 audit controls. Once you're ready to enter the audit, you release the required information to your auditor in-app, with no additional work required on your end (or theirs).

Other compliance software solutions provide audit readiness only, lack auditor approved monitors and leave you to coordinate complex auditor communication. See how our end-to-end solution works in the example below where we follow the path of proving your Google MFA settings.

The Only End-to-End Audit Experience: Why it Works

Seamless readiness drives faster outcomes

Thoropass guides you through your entire compliance journey—from program design and readiness assessment, to audit prep and report in-hand. Guided workflows and custom-written policy and procedures coupled with automated evidence gathering, native integrations, and collaboration tools save you countless hours during your audit preparation.

Efficient execution lowers your lift

With Thoropass, you manage one super-powered workflow from start to finish. Our powerful combination of tech-enabled efficiencies and project management resources provide guidance every step of the way. From control implementation, to automated evidence collection, to audit kickoff, and completion, Thoropass is the most efficient path to audit.

Tech-enabled audits create verifiable quality

Thoropass's tech-enabled process removes manual work for you and the auditors, reducing error and creating a verifiable digital audit trail. It's why our SOC 2 reports have helped hundreds sail through even the most rigorous vendor review processes with ease.

Auditors that audit

At Thoropass, our auditors do audits, not taxes. They're well versed in SaaS and modern cloud tech stacks and they embrace technology to help get audits done programmatically and efficiently. Our cloud-native, technical assessors are "Big 4" alumni with a philosophy centered around a growth-focused, differentiated report delivery to provide you with confidence going into any vendor due diligence process.

Expert Support & Services

Support services

→ Dedicated compliance expert on hand

→ Designated project manager

→ Transparent audit representation

Thoropass auditors

→ Cloud-native, technical assessors

→ Security audit experts including "Big 4" alumni

→ Growth-focused, differentiated report delivery

Supported frameworks

> "
> Having one vendor for everything from the preparation to the audit just made the process so much simpler. One of the things I was dreading getting into this was, how do I choose an auditor? What makes a good auditor versus something else? How do I know that whoever I'm preparing with is going to help with the auditor? It was just all one seamless process. It just felt like the next step. We were able to work with the same main point of contact at Thoropass for both the preparation and then helping to navigate the audit.
